

The Protocol for Trust in Spiritual Commerce

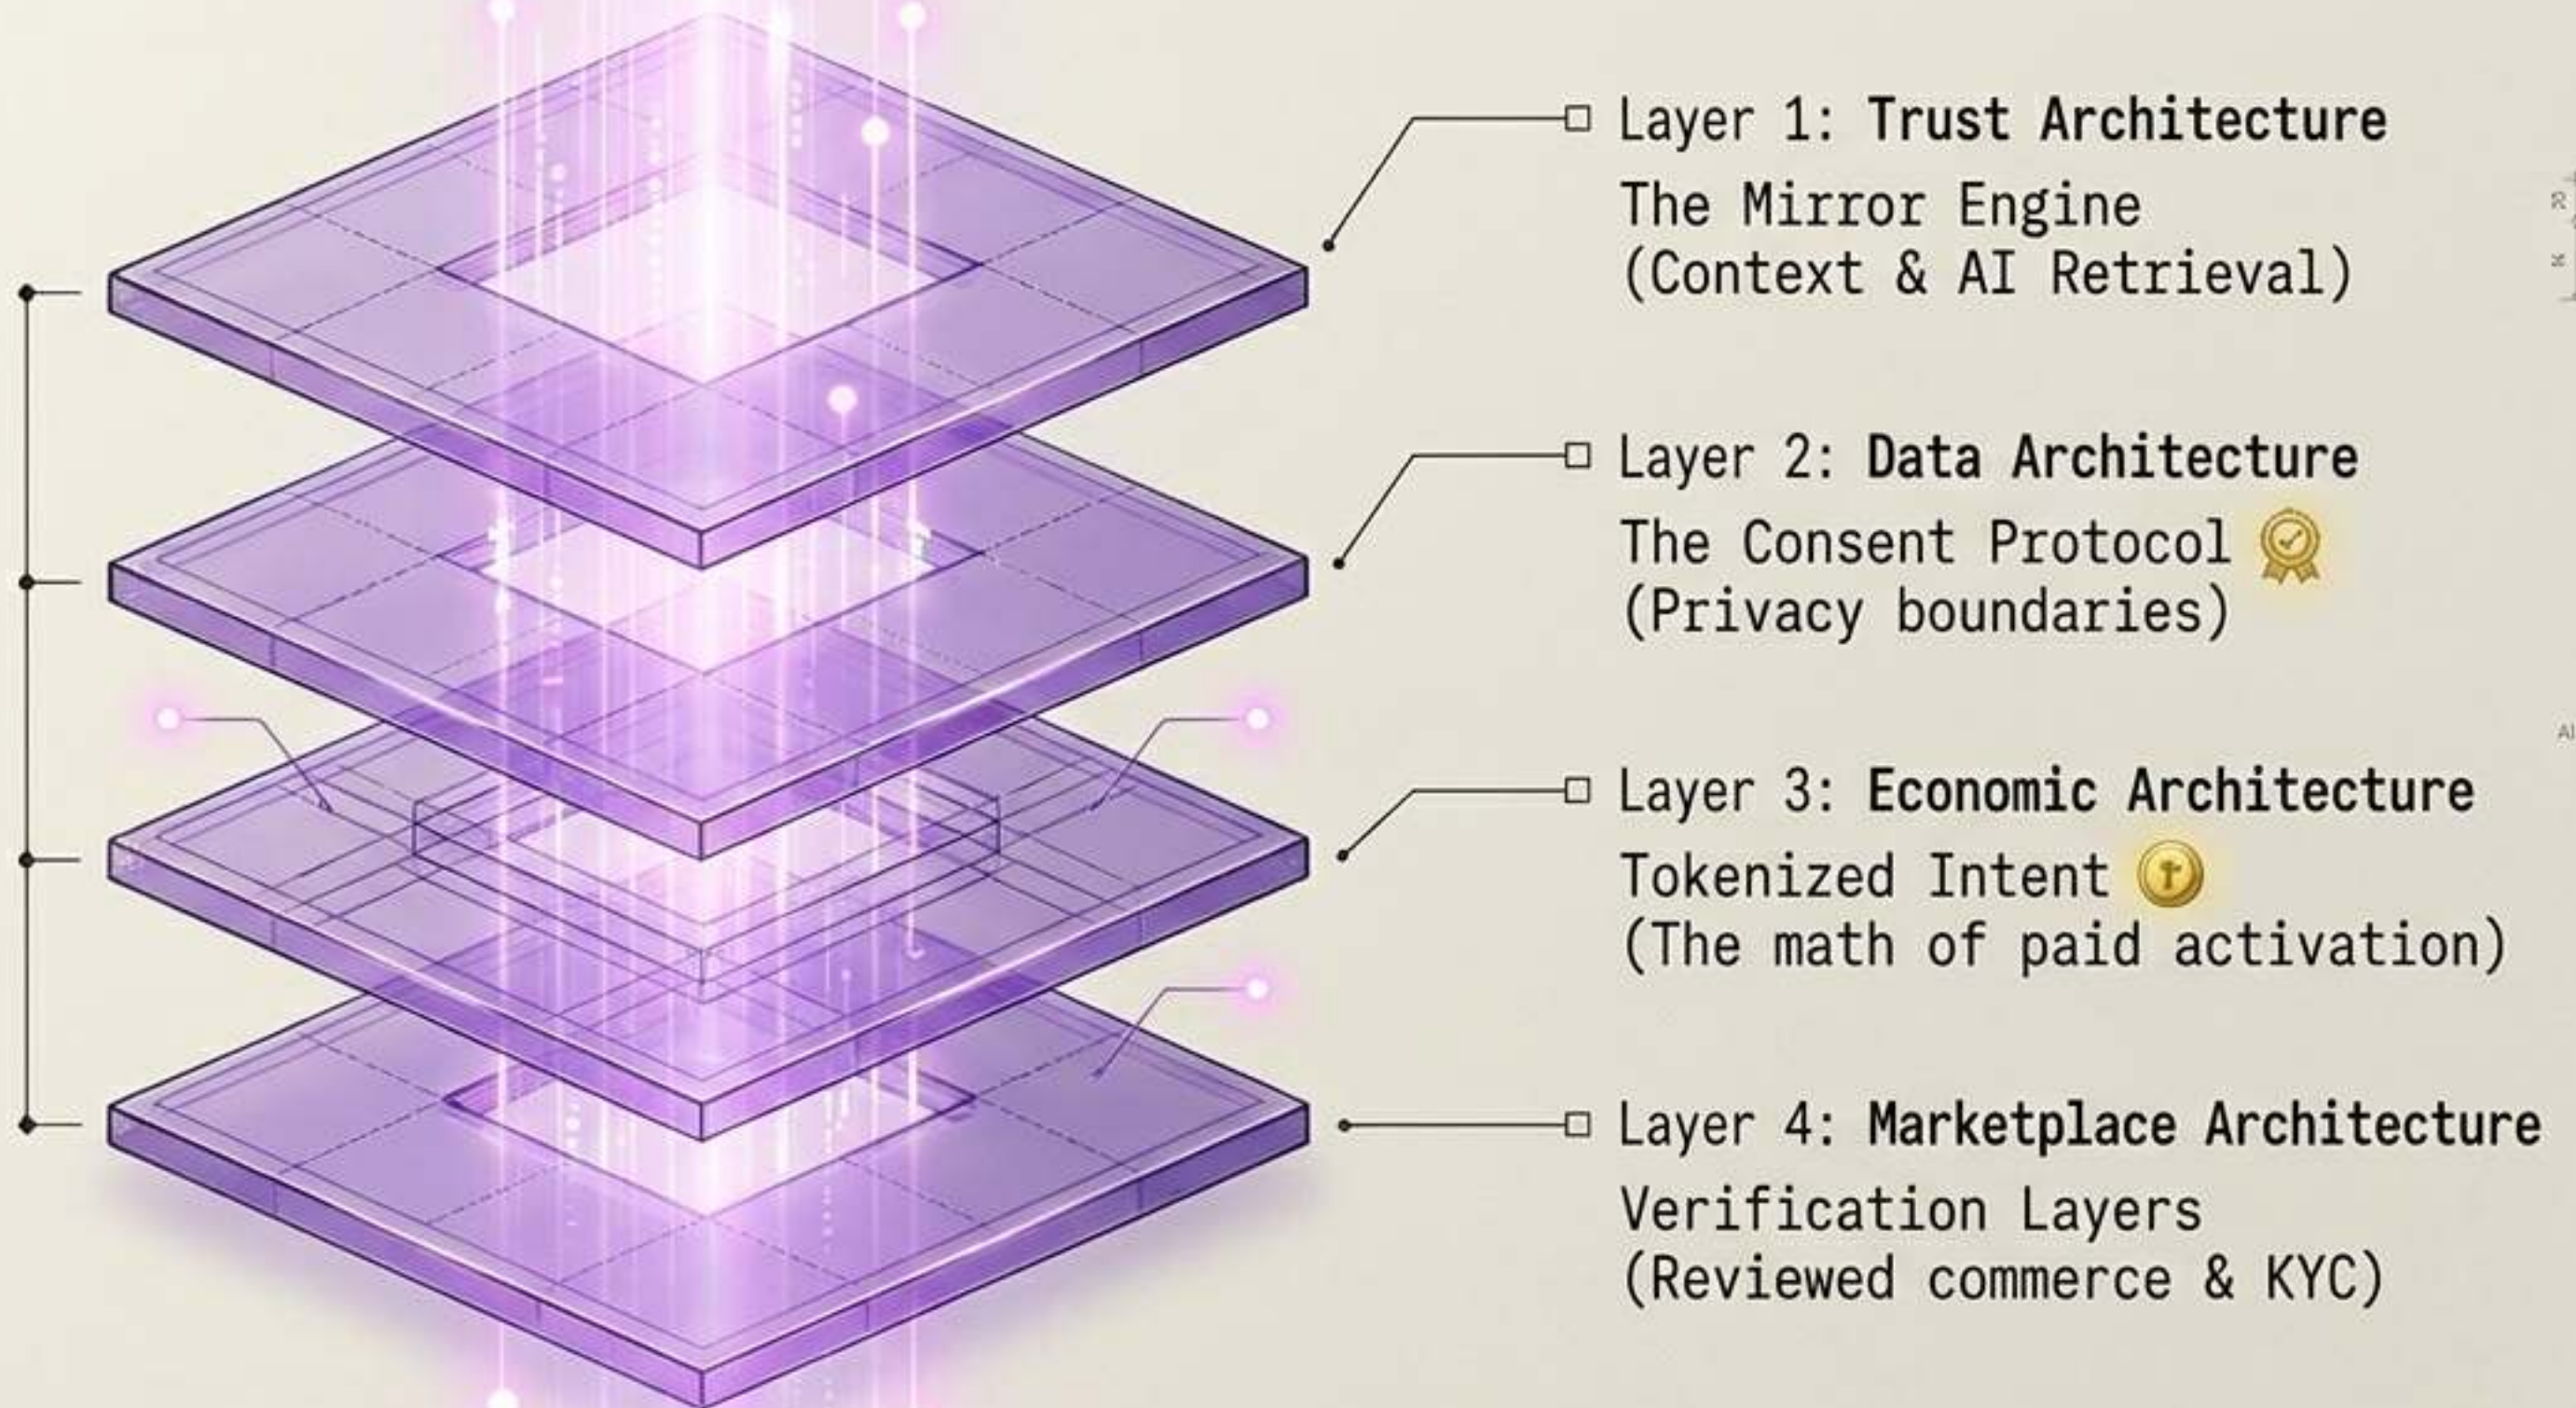

A technical deconstruction of Klear Karma's trust architecture, tokenized intent, and consent-safe practitioner handoff.

The Market Diagnostic: Solving the Trust Deficit

	GENERIC DIRECTORIES	CONTENT APPS	KLEAR KARMA
DATA PRIMACY	Category, Time, Price.	Consumption habits.	Lived context and symbolic reflection.
INTENT SIGNAL	Cold browsing clicks.	Subscription auto-renew.	Token recharge after meaningful Mirror use. 
PRACTITIONER HANDOFF	Low-context cold leads.	N/A.	Consent-safe,  boundary-reviewed context map. 

The Reflective Blueprint: A Four-Layer Protocol

Layer 1: Trust Architecture & The Mirror Engine

Non-Deterministic Input
Asks one primary question at a time, summarizes, and requires user confirmation.

Clinical Boundary
Hard-coded routing away from spiritual guidance claims if crisis or clinical signals are detected.

Symbolic Context
Processes optional birth data (Zodiac, Dasha) strictly as symbolic context, never as predictive certainty.

Layer 2: The Consent Protocol

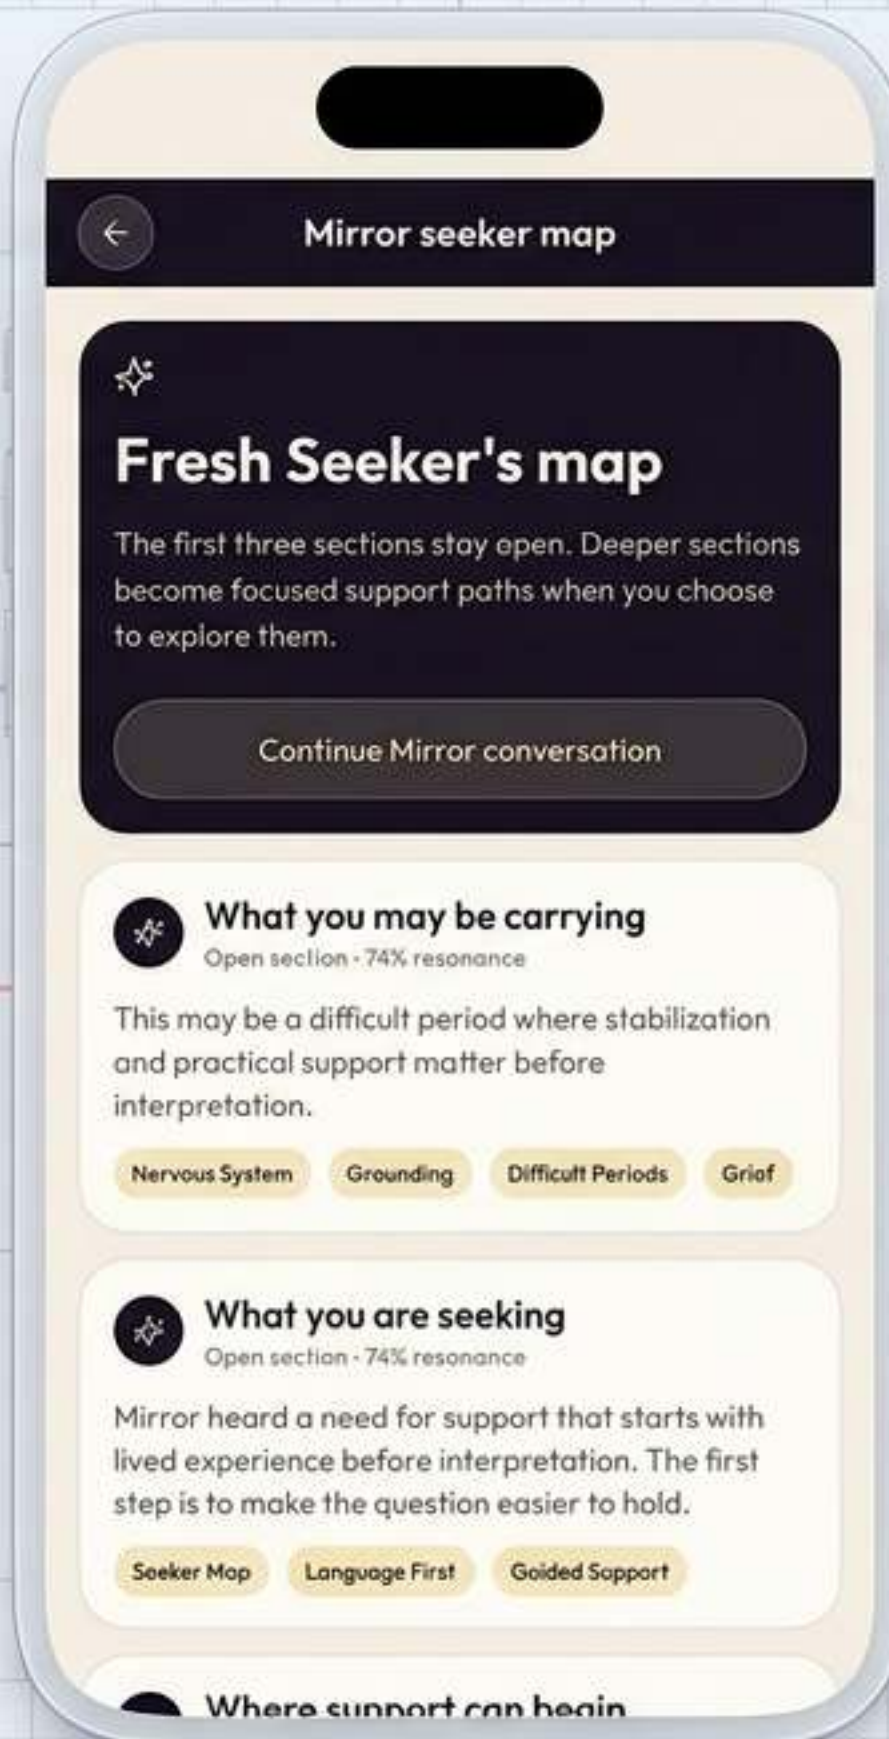

Key Insight: Generic directories force users to choose between zero context (cold lead) or total vulnerability. The Consent Valve engineers a middle path: high-context, low-vulnerability handoff.

Output: The Consent-Safe Seeker Map

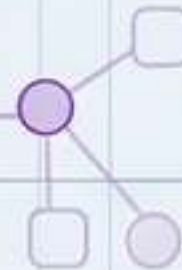

Fallback State

System includes manual-state data paths if AI retrieval is unavailable or if the user opts out of algorithmic summaries.

Dynamic Access

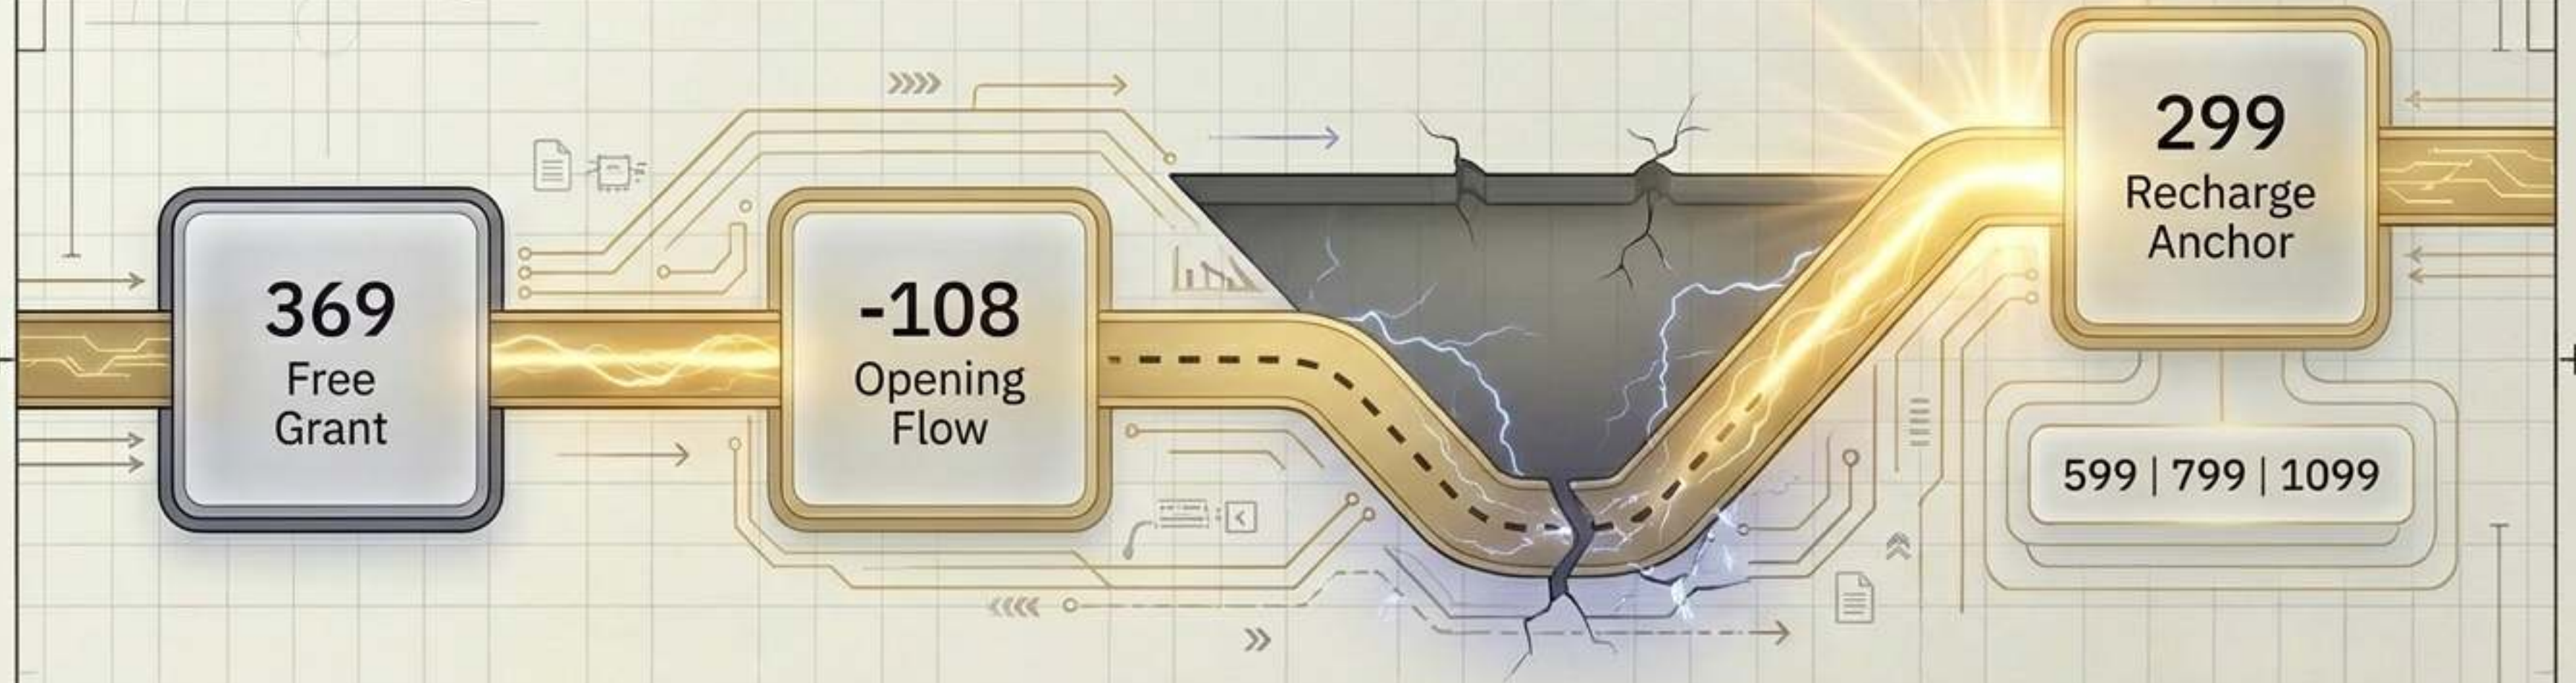

The first three sections stay open; deeper sections become focused support paths only upon user selection.

Actionable Routing

Converts abstract emotional inputs into structured tags (e.g., Nervous System, Grounding).

Layer 3: Economic Architecture & Token Physics

The acquisition hook for new users.

The mathematical cost of the initial Mirror/chart reflection.

The Depletion Gap
The user must now decide if the reflection was valuable enough to continue.

The primary paid activation signal (Local THB or INR).

Protocol Metrics

**Paid
Activation**

Definition of Paid Activation:

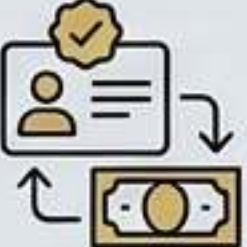

A user who recharges at least 299 tokens within 90 days of signup or interaction.

Layer 4: Marketplace & Verification Architecture

Verification

Strict KYC and payment verification required for payout readiness.

The icon shows a person's profile with a checkmark above it, and a banknote below it, with arrows indicating a process flow.

Practitioner Incentive

No consultation commission in MVP or early growth to aggressively acquire high-quality supply.

The icon shows a hand holding a gold coin with '0%' written on it.

High-Context Leads

Practitioners receive heavily contextualized, consent-approved mapping rather than generic, low-converting discovery traffic.

The icon shows a database cylinder with several nodes connected to it, and a ribbon with a checkmark.

Protocol-Reviewed Contextual Commerce

Profile-Scoped Offerings

Product listings are tied directly to practitioner profiles, not dumped into a generic app-wide shop tab.

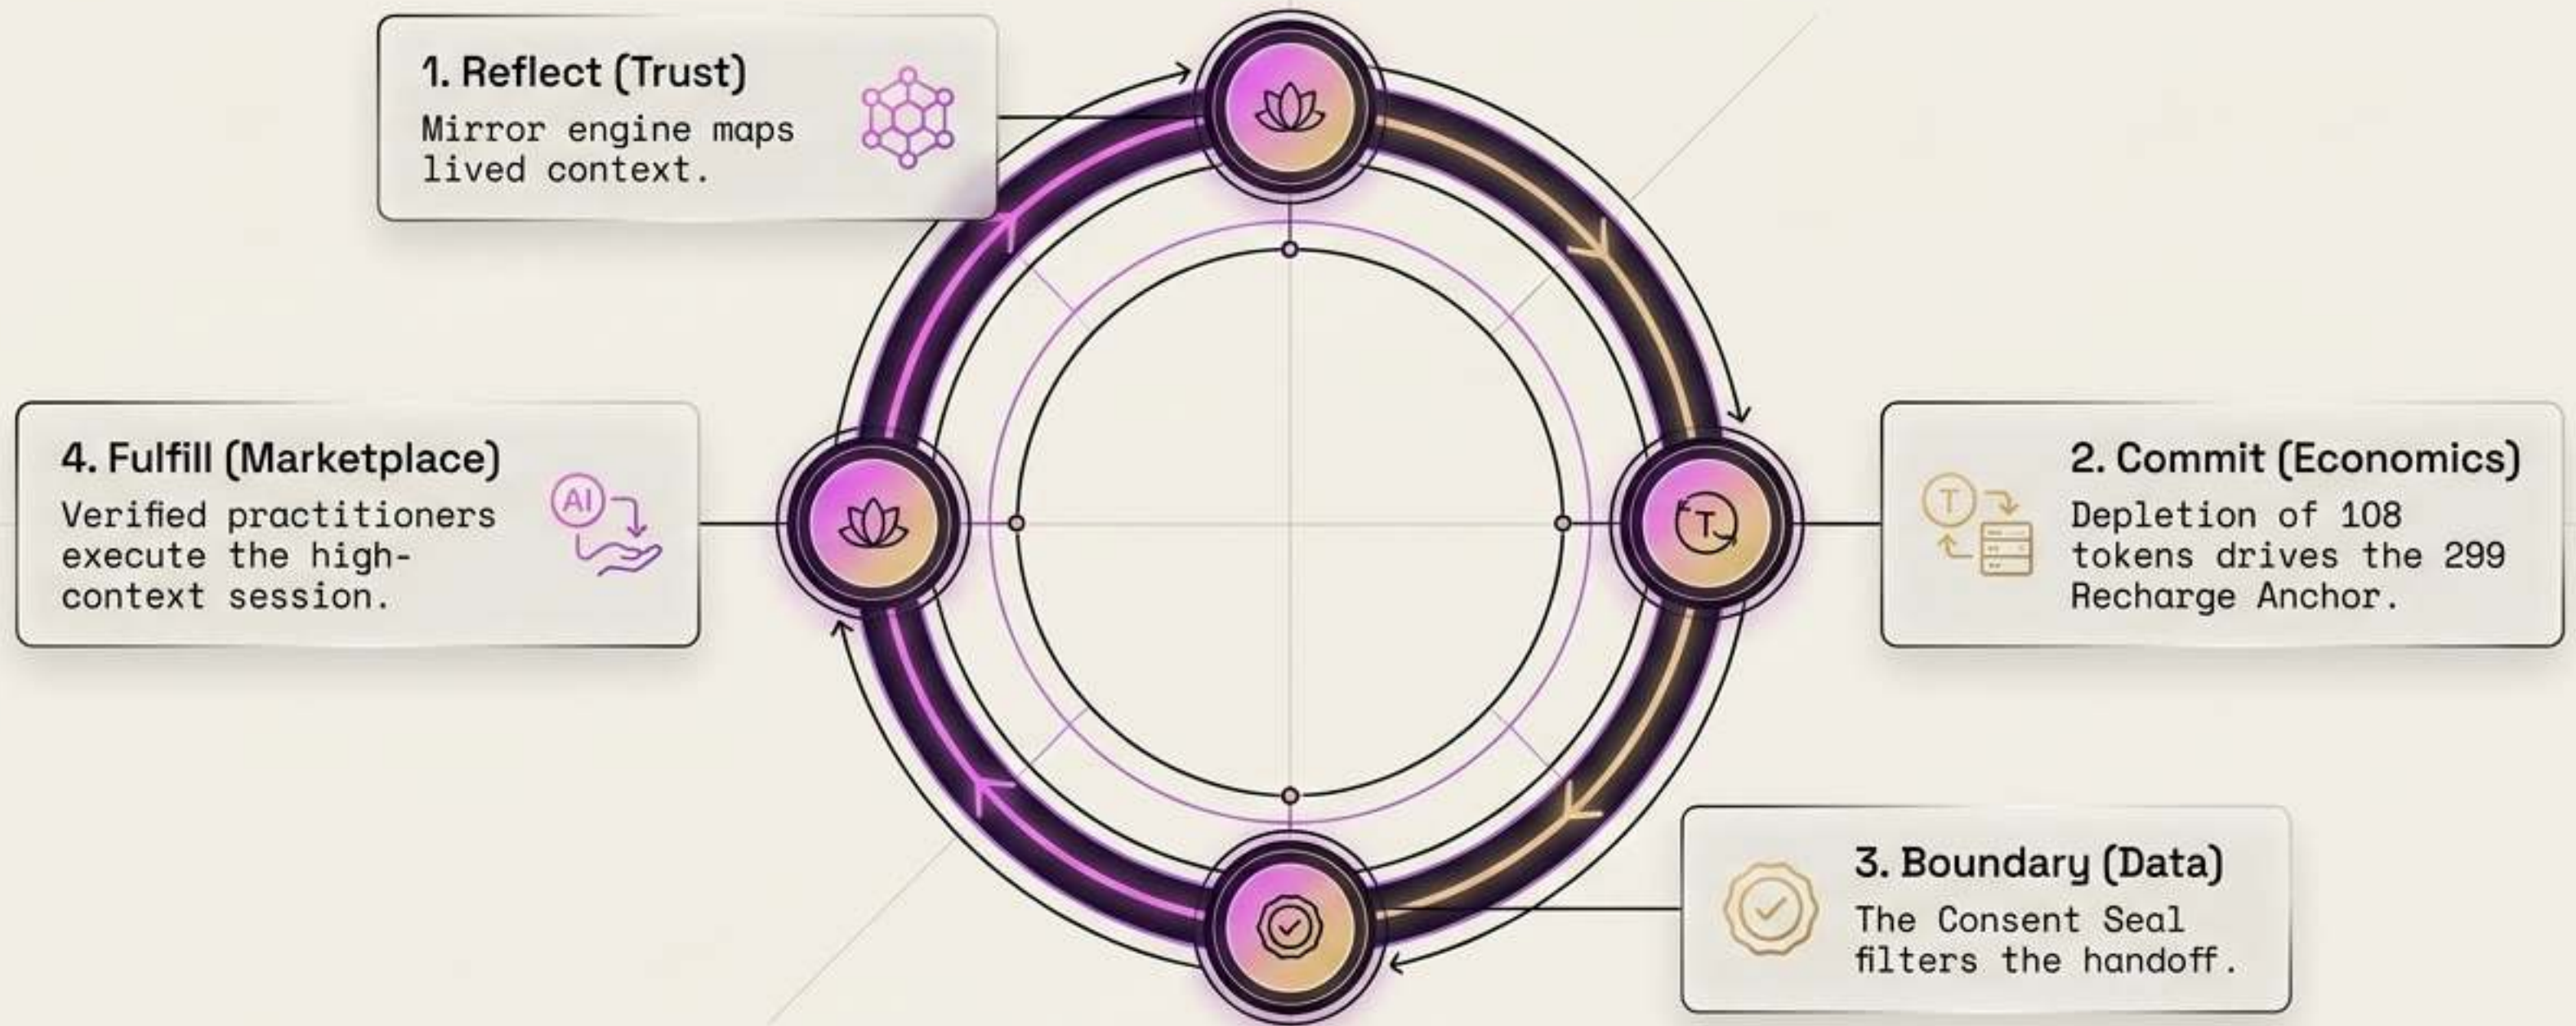

Review Gates

Founder-only manual review in beta ensures no misaligned physical products or unverified remedies enter the ecosystem.

Economic Capture

Potential 10% revenue share on product sales once trust and fulfillment are proven.

Synthesis: The Continuous Trust Loop

Klear Karma is not a directory. It is an end-to-end engine that converts abstract spir spiritual seeking into structured, verifiable, and economically viable intent.
